

INTRODUCING

HALEY PAINT FLATLINE

The Haley Flatline machine is an automated linear spraying machine that's been developed with the Shed and/or Cabin Builder in mind. It can be used for priming, staining, or sealing any type of linear stock up to 16" wide.

CONSISTENCY

Haley Flatline provides a consistent and uniform coating application, minimizing variations in thickness and appearance, which can be challenging to achieve with hand spraying.

SPEED & EFFICIENCY

Haley Flatline can cover larger surface areas quickly, significantly reducing the time required for coating projects compared to hand spraying, which can be labor-intensive and time-consuming.

COST SAVINGS

While the initial investment in a Haley Flatline may be higher than manual spraying equipment, the long-term cost savings in terms of reduced labor and material waste often justify the expense.

KEY FEATURES:

- In-feed guide rails and hold-down roller
- Variable speed conveyor and exhaust motors
- All-aluminum spray enclosure
- Filtered-exhaust system with replaceable overspray arrestors
- Three Graco automatic Airless Guns w/ RAC X Guards and Tips
- Touchscreen HMI screen with PLC control
- Individual gun trigger valves for triggering on/off delays for each gun
- Graco 30:1 Merkur with siphon hose, fluid regulator and manifold filter
- Line shaft-driven conveyor system
- Mounted on casters to move around shop, can be permanently mounted
