

HALEY PAINT INLINE PAINT SYSTEM

Haley's Air-Powered, Multi-Color Paint System

WHY CHOOSE THE HALEY PAINT INLINE SYSTEM?

RELIABILITY

Lowest maintenance cost over the years

The Haley Inline System is designed and built with high-quality components such as the proven Graco Merkur airless pump. It has unmatched performance when compared to smaller electric pumps.

NEAT & COMPACT

The Haley Inline System can be installed into a space as narrow as six feet wide. The hose reels keep all of the hoses stored off the floor and the hoses can be made to any desired length. They will not roll up on wet buildings like traditional paint hoses.

REDUCES WASTE

Switching colors only takes seconds and can involve as little as a few ounces of material versus wasting time and material to flush the entire pump and spray hose. Wet paint can stay pressurized in the lines and does not require daily cleanup or flushing.

The Haley Paint Guarantee

- ✓ Easy & simple color changing process!
- ✓ Customization available to meet the needs of your shop's layout!
- ✓ Our team will design and install the complete system. Additionally, we fully train your team including how to properly maintain everything.
