Why the HVLP Trailer?

Haley Build Process:

- We start off by removing all the interior sheathing and trim
- Build out the walls and ceiling to allow for a full 3-4" of spray foam insulation
- Walls are re-installed and painted with a high performance chemical-resistant coating
- The entire trailer is trimmed out and a ceiling is installed for a professional look
- An electrical package is installed to allow the trailer to be hooked up to a single 110v outlet overnight or to the included inverter generator
- A mini split with a heat pump is installed to keep the trailer perfectly conditioned
- The trailer floor is coated with Haley Poly Shield for a bulletproof floor coating

Included with the Trailer Package:

In addition to the build process, the trailer comes with:

- Rolair 6.5HP gas compressor
- 4250W inverter generator
- Fully capable HVLP system with a 75ft heated hose

Available options:

- We can have the trailer wrapped with your information and logo
- Ask about the "Dually Unit" that has two HVLP systems in it for the ultimate production rig
