

HALEY PAINT CLOSED CELL INSULATION

Turn your shed into a liveable space!

WHY SPRAY FOAM INSULATION

STRENGTHENS THE WALLS & FLOORS OF THE BUILDING

Spray Foam Insulation is dense and will get everywhere. When applied it slowly expands filling in any small seams or gaps. It will then act like glue helping hold your building together.

BLOCKS AIR, WATER & PESTS

Due to spray foam insulation getting into the tiny seams in your building, it creates a barrier for small pests, pollen/allergens, unwanted air movement and water from getting into your structure and causing problems.

NOISE REDUCTION

Your new building can serve a million different purposes but if any of them are man caves, she sheds, home offices, etc., getting a building with spray foam insulation will keep the outside noise at bay.

LONGEVITY

It will last the lifetime of your building! Spray Foam insulation does not sag or break like other insulations. It will stay put providing consistent protection for your structure.

CREATE A LIVEABLE SPACE

Spray foam insulation allows you to easily heat or cool your structure by helping block the outside temperature from creeping in and your heat or AC from creeping out as well!
